CO-WORK PROGRAM

MEET OUR OPEN SPACE

A place where people and innovative ideas come together

OUR CO-WORK PROGRAM

The Co-work program targets start-ups professionals. independent Αt and request the TERINOV, we physical establishment of all projects interested in We believe this program. that infrastructures provide tenant projects with additional assets and opportunities, hence setting up an open space dedicated liberal to start-ups and professionals.

A coworking space is characterized by its dynamic and collaborative atmosphere. Co-Work, as the name implies, is the concept of working together. This concept is based on an evolving working model that provides tenants with significant benefits, from flexible working hours to modified workplaces business operations.

Coworking spaces have been proliferating worldwide in urban and rural areas while facilitating entrepreneurship and digital business models. Sharing a workspace with other professionals enables you to leverage your creativity and social power, increase productivity, and develop symbiotic relationships with other entrepreneurs or their projects.

With a different installation logic than conventional incubation, our co-Work program was designed to involve other types of human resources that are not necessarily entrepreneurial but are technically valid to contribute broadly to the ecosystem, thus developing some of these activities:

LIBERAL PROFESSIONAL

Professionals with skills and a considerable degree of expertise, many of whom provide specialized services and have their client databases, but who, without intending to be entrepreneurs, can actively contribute to the creation of economic initiatives in which they may or may not be promoters.

NTREPRENEURS

Entrepreneurs in the ideation phase. These are proactive professionals with a business idea, a product, or a service and who want to check the feasibility of a possible investment. This type of human resources are usually active recipients of information and are generally one of the main types of beneficiaries of this type of infrastructure.

SEARCHERS

They are users directly or indirectly linked to the academy who develop projects of potential commercial interest. They knowledge are usually users without in business management, information and communication technologies, or cultural and creative industries and want to access qualified infrastructures for carrying out tests or building prototypes, looking mainly for new knowledge and specialized support.
